

Practical case 4

Student: Yago Toro Molina (ytoro-mo).

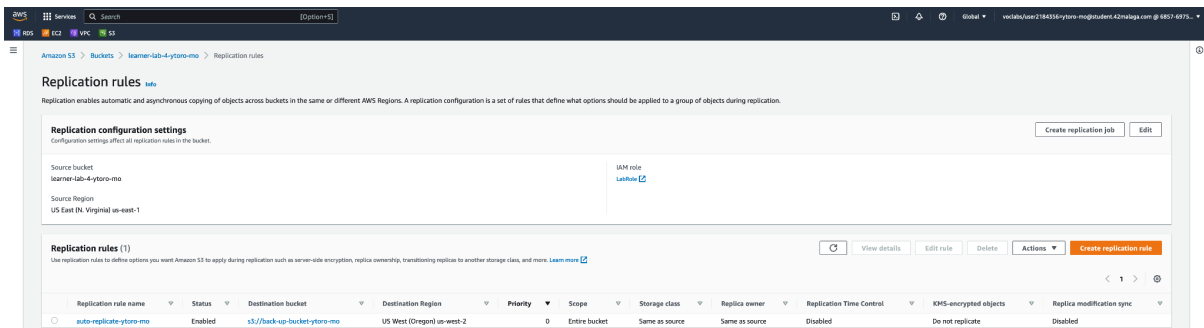

E-Mail: ytoro-mo@student.42malaga.com

Task

- We create a bucket with enabled versioning.

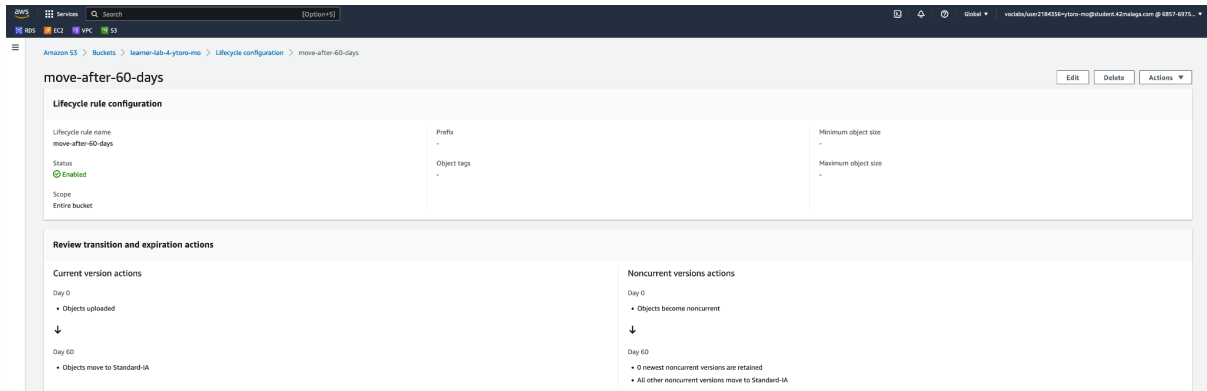

- We create a replication rule to replicate the bucket's content in other bucket located in other region (us-west-2).

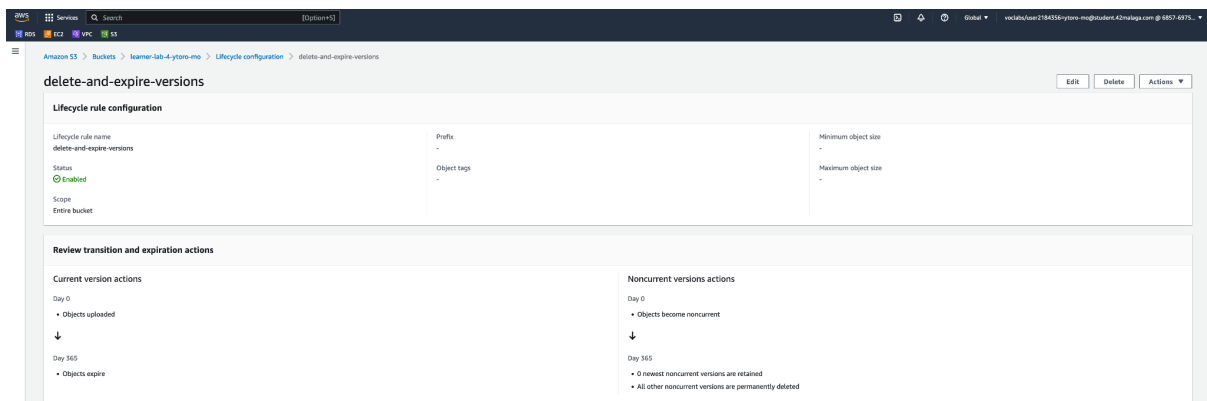

- Todos los objetos que se encuentren almacenados en el bucket deberán moverse, de forma automática, al nivel de almacenamiento Standard-IA cuando se cumplan 60 días desde su creación. Igualmente, todos los objetos deberán eliminarse automáticamente cuando se cumplan 365 días desde su creación.

- We create a lifecycle rule to move current and noncurrent versions to Standard-IA storage class after 60 days.

- We create a lifecycle rule to expire current versions after 365 days and delete noncurrent versions after 365 days, too.

- We create, in addition, another lifecycle rule to delete expired versions.
